

Written Status Report

CMSI 4072 Project Status Sheet Spring 2026

Name: Sammy Santos

Project: Sammy's Games: A Board and Card Game Platform

Date: May 6, 2026

Period Covered: April 23 – May 6

Accomplishments since last report:

Following the completion of the core mechanics for **Color Spiral** and **Step Count**, I have focused on expanding the platform's library and refining the global user experience.

- **Boxing Bot Implementation:** Developed a 2-player combat game (Player vs. CPU) featuring a strategic move speed priority system.
 - **Mechanics:** Implemented specific move properties including Jabs (fast/low damage), Crosses (medium speed/damage), and Hooks (slow/high damage/unblockable).
 - **Stun Logic:** Engineered a defensive "Block" mechanic that stuns opponents using Jabs or Crosses for one turn.
 - **AI Personality:** Built an AI opponent with priority-based decision logic that adapts its behavior based on whether it or the player is currently stunned.
- **Number Tic-Tac-Toe Development:** Created a new variation of the classic grid game that introduces stacking strategy.
 - **Incremental Play:** Replaced static piece placement with an incrementing mechanic where players increase a cell's value (0-3) on their turn.
 - **Advanced Win Conditions:** Programmed the game to detect three-in-a-row of the same number (excluding 0), requiring players to track both position and value.
- **Global Navigation Integration:** Successfully integrated the entire suite of games, including RPS, Knockout, Five/Six Hands, Step Count, Color Spiral, and the new Boxing and Number TTT entries, into a unified navigation bar across all HTML files to ensure seamless flow.
- **Visual Consistency:** Applied a unified dark-themed UI (consistent with the "Sammy's Games" branding) across new game files, utilizing CSS Flexbox and Grid for responsive layouts.

Final tasks:

- **Platform-Wide Bug Squashing:** Conduct a final end-to-end testing pass to resolve any remaining edge cases.
- **Final Documentation:** Prepare the final project portfolio and technical documentation for the platform.

Current Status:

ON TRACK. The platform now features a robust lineup of eight unique titles, significantly exceeding the original project goal of three games. The focus has shifted entirely to final polish and cross-page stability.

Future risks, concerns, or problems:

- **Navigation Maintenance:** With the growing number of game files, manual updates to the navigation bar in every individual HTML file are becoming tedious.
- **Mitigation Plan:** Ensure all links are finalized before the final submission to avoid broken paths across the platform
